

## A board in community space to engage in safe conversation

This idea is to give a specific place where we can become aware of the individuality of all people that take part in our community.

This project promotes tolerance, empathy and diversity inside the daily life of persons that reside in the same city.

This community tool would give an area where open-hearted conversations could bring others to engage in a reflection. It would introduce the idea of safe space; where anyone can participate, listen to and be respected. It is important that it is accessible by the public and looked after; this allowed people to have the possibilities to express themselves without fear of judgment.

This is the first board project that I did, it is in front of my house, and I put the slogan:

Diversity and Benevolence, Beneficial for all!

And the text in French and English to accommodate the linguistic diversity of my community:

This board is a Safe Place where people are invited to welcome and share the diversity of (name of the community). Leave us a mindful testimony which represents you!

I handwrote those for calling to the intimacy and didn't put instruction to support as possible the need for open-minded of this project.

I decorated it with things comes from around my house, braided vines, dried flowers, pieces of wood, old jeans and pin button.

I want this project to be an idea that can be modelled in lots of communities to promote those creative safe spaces.
